Professional Summary

Aspiring AI Engineer with a strong foundation in Python, AI/ML, NLP, Generative AI, and SQL. Backed by hands-on internship experience in LLMs, vector databases, FastAPI, RAG-based systems, and deployment, along with AI-driven workflow automation. Seeking a challenging role to build scalable, cutting-edge AI solutions.

Education

GM Institute of Technology

Bachelor of Engineering in Artificial Intelligence and Machine Learning (CGPA: 7.70 / 10.00)

Nov 2022 – Present

Davanagere, Karnataka

Experience

ShreeGenIX Intelligent Systems PVT LTD

Artificial Intelligence Intern

July 2025 – Jan 2026

Bengaluru, Karnataka

- Engineered scalable AI services using FastAPI, RAG pipelines, and Vector database architectures, integrating LLM-driven APIs into production workflows with optimized latency and retrieval performance.
- Applied PyTorch and finetuning techniques to enhance LLM accuracy, leveraging LangChain for orchestration, prompt engineering, and multi-step reasoning across domain-specific use cases.
- Collaborated cross-functionally to productionize AI systems with monitoring and scalable architectures.

Projects

Hybrid RAG AI Customer Support System | FastAPI, FAISS, Gemini API, SQLAlchemy, Vector DB

[GitHub Link](#)

- Built a hybrid RAG-based AI support system using FastAPI, combining SQL queries and FAISS vector search for semantic product retrieval and order tracking responses.
- Designed multi-intent routing with semantic search and structured retrieval, achieving ~93% intent classification accuracy and improving contextual response relevance.
- Implemented modular LLM architecture supporting Ollama (local) and Gemini APIs with session-based memory, enabling scalable multi-turn conversations.

AI Math Mentor | FastAPI, Streamlit, Gemini API, RAG, ChromaDB, OCR, Whisper

[GitHub Link](#)

- Developed an end-to-end multimodal AI system to solve JEE-level mathematics problems from text, image (OCR), and audio inputs, achieving over 90% accuracy across algebra and calculus queries.
- Designed a RAG-based multi-agent architecture leveraging ChromaDB vector database for semantic retrieval, combined with prompt engineering to improve contextual relevance and response quality by around 85%.
- Built scalable REST APIs using FastAPI, integrating PaddleOCR and Whisper with Streamlit UI for real-time output.

Technical Skills

Programming Languages: Python, SQL, JavaScript

Web Technologies: HTML5, CSS3

Libraries and Tools: NumPy, Pandas, Scikit-learn, PyTorch, Docker, MySQL, Git, GitHub, n8n Workflow Automation.

Fundamental Knowledge: Generative AI, Artificial Intelligence, Machine Learning, Data Science, Natural language Processing (NLP), Deep Learning, Large Language Models (LLMs), APIs, FastAPI, Vector Databases, Data Structures and Algorithms, Object-Oriented Programming (OOP), Version Control, Database Management Systems (DBMS).

Certificates

- [Python - Udemy](#)
- [SQL - Udemy](#)
- [AI Engineering - Udemy](#)

Achievement

Secured 1st place in a national-level hackathon (Ignitron 2K25 – ModelQuest Event), conducted by GM University, by developing a lightweight and efficient image classification model under on-spot competition constraints.
